

Technical Data Sheet

pearl pigment consists of mica flake coated with TiO₂ and Fe₂O₃. The different gold luster appears by accurately controlling the thickness of the coating layer and the percentage. Big particle size of these pigments shows sparkle and brilliant golden luster when small size of these gives out attraction satin gold effect. YAYANG golden luster pearl pigment can be formulated with each other. If you want a special gold luster effect, you can select the right items to have a combination. Compared to metallic powder, these pigments are widely used for their better properties, such as high temperature resistance, chemical
