

WAX MELT KIT

*This kit is created using a range of ingredients and products by Supplies For Candles.
Please ensure all safety precautions are in place when making wax melts.*

For usage rates please see our guide below.

EQUIPMENT NEEDED

- Hob or Hot Plate
- Double Boiler/Pan
- Pouring Jug
- Weighing Scales
- 2 x Glass Bowls
- Thermometer
- Utensil For Stirring

STEP ONE: PREP

Using scales, weigh out your required wax into a bowl. Lay out your wax melt containers or moulds onto a flat surface ready for pouring.

STEP TWO: MELT

Carefully, pour boiling water into your double boiler or pan until it is approximately half full. Then place on the hob, on low heat. Gently place your bowl of wax on top of your pan and allow to melt, stirring regularly. **DO NOT LEAVE UNATTENDED.** When your melted wax reaches 70°C, remove your container from the hob/hot plate and pour your melted wax into your pouring jug.

STEP THREE: ADD

Using your thermometer, ensure your wax is 65°C, then add in your fragrance oil and colour, make sure you give your wax a good stir to ensure your ingredients have blended throughout.

STEP FOUR: POUR

Carefully, pour your wax at around 60-65°C into your container or mould. As you are pouring the wax, ensure you are pouring gently and slowly to avoid air bubbles. Then leave to set for at least 24hrs. We recommend storing your wax melts in a cool, dark place for approximately two weeks to cure. This isn't essential, so if you're super excited you can enjoy your very own wax melts as soon as they have set!

Measurement/Usage Guide

Clamshell - 80g of Wax

Deli Pot - 40g of Wax

Fragrance - 6-10% Usage (Weigh in grams)

Colour - 0.2% Usage (Depending on preference)
